

Wishing you the best from Northman Fluid Power!

This issue of our "People and Product News" consists of two attachments we think you will be interested to see!

Not only do we have manually operated (hand lever) directional control valves, we have (A) a standard series that is not shown in our catalog and (B) a superseded design that is now available for purchase at reduced cost while supplies last!

"HD Common Stock"

This page details out our commonly stocked HD Series Valve. It does a number of things:
It shows the exact valves we stock.
It shows the Part Numbering System in a clear manner.
It introduces the G03 size that is not shown in our catalog.
(You may want to tuck this into your catalog pages for reference.)

"HD -50 Series"

This page presents a superseded design series that we still have some configurations of in stock. These items are "form, fit and function" for our current series - the difference is in appearance only. They are available to you at special pricing as long as supplies last!

As always, contact us any time with requests, questions, suggestions - anything that helps us in our partnership to sell and apply valves and pumps!

And best wishes for great selling!
